APPLE INC. STOCK MARKET ANALYSIS DASHBOARD

Project Introduction

INTRODUCTION

The **Apple Inc. Stock Market Analysis Dashboard** is an interactive business intelligence project developed using **Microsoft Power BI**. The dashboard provides a comprehensive analysis of Apple Inc.'s stock market performance by using the **latest 100 days of stock data** collected through an **Application Programming Interface (API)**.

The primary objective of this project is to transform raw stock market data into meaningful insights through interactive visualizations and Key Performance Indicators (KPIs). The dashboard enables users to monitor important stock metrics such as **Highest Price, Lowest Price, Latest Open Price, Latest Close Price, and Total Trading Volume**.

The project utilizes **Power Query** for data extraction and transformation, **DAX (Data Analysis Expressions)** for calculations, and **Power BI visualizations** for presenting trends and patterns in an interactive manner. Users can also analyze stock performance for a selected period using the **Date Range slicer**.

This dashboard demonstrates practical skills in **API integration, data transformation, data modeling, DAX calculations, and dashboard design**, making it a useful tool for understanding stock market trends and supporting data-driven decision-making.

Conclusion

The Apple Inc. Stock Market Analysis Dashboard successfully provides a clear and interactive analysis of Apple's stock performance over the latest 100 days using Microsoft Power BI and API-based data. The dashboard enables users to monitor important stock indicators such as Highest Price, Lowest Price, Latest Open Price, Latest Close Price, Trading Volume, and monthly trends through interactive visualizations.

By using Power Query for data transformation, DAX for calculations, and Power BI for visualization, the project converts raw stock market data into meaningful insights. The Date Range slicer and interactive charts allow users to analyze stock performance efficiently and support better data-driven decision-making. Overall, this project demonstrates the practical application of API integration, data modeling, dashboard design, and business intelligence techniques in real-world stock market analysis.
